Overview

This playbook converts the raw NotebookLM + Gems Blueprint Pack into a structured, step-by-step implementation system. Three complete AI pipelines built entirely with free Google tools: NotebookLM for research and knowledge management, Google Gemini Gems for repeatable AI workflows, and Google Docs for output and collaboration. Every prompt and Gem instruction below is ready to copy and paste. The outcome is three functioning systems you can deploy today.

Tools Stack

Tool	Purpose	Why This Tool
NotebookLM	Research and knowledge management	Sources every claim back to an original document. Deep Research finds additional sources automatically.
Gemini Gems	Custom AI assistants	Keeps behavior stable across conversations. Instructions persist without re-pasting. General-purpose by design.
Google Docs + Gemini	Output and collaboration	Drive search connects Gem output to reference documents. Inline editing within your existing workspace.

Core System -- The PACT Framework

PACT is the formula that makes Gem instructions consistent. Build every Gem with all four parts.

P: Persona

Who the Gem is acting as. This sets voice, expertise level, and communication style.

Example: "You are a direct, professional business communicator who values brevity."

A: Assignment

The specific output you want every time. One clear task.

Example: "Draft client emails based on the situation I describe."

C: Context

Guardrails that keep output consistent: word limits, banned phrases, tone rules, formatting constraints.

Example: "Keep every email under 150 words, never use filler phrases like 'I hope this finds you well' or 'just checking in,' always end with one clear next step, and keep the tone friendly but not casual."

T: Template

The structure the output must follow. This locks in formatting so results are consistent.

Example: "Subject line, greeting, body in two short paragraphs max, closing with the next step clearly stated."

Why PACT Works

A regular Gemini chat can drift as conversations get longer. A Gem with PACT instructions keeps behavior stable across multiple interactions and topics.

Setup Checklist

Work through these in order:

- **1.** Open NotebookLM and create a new notebook for your use case
- **2.** Upload all relevant source documents
- **3.** Use Deep Research to find additional sources, if applicable
- **4.** Generate your reference document from the Studio panel
- **5.** Save the reference document to Google Drive
- **6.** Open Gemini and go to Gems in the sidebar
- **7.** Click My Gems, then New Gem
- **8.** Write your instructions using the PACT framework
- **9.** Leave the Knowledge section empty so the Gem stays reusable across topics
- **10.** Save the Gem
- **11.** Open Google Docs and click the Gemini icon, top right
- **12.** Click the plus icon in the prompt box and enable Drive search
- **13.** Open the menu and select your Gem
- **14.** Type your task prompt, referencing the Drive file by name
- **15.** Review the output, adjust as needed, and insert into your document

System 1: Content Research Pipeline

Separate research from writing. NotebookLM handles sourcing and verification. The Gem handles voice and formatting.

Step 1: Build the Research Base in NotebookLM

- Create a new notebook in NotebookLM.
- Upload your sources: articles, reports, competitor posts, PDFs, and anything relevant.
- Switch the prompt box to Deep Research using the dropdown on the left.
- Type a research query to find additional sources beyond what you uploaded.

Example Deep Research query: "Find additional sources on AI productivity tools and how businesses are adopting them in 2026."

- When Deep Research finishes, press Import to pull everything into the notebook.
- Delete any sources that failed to load.

Step 2: Generate the Research Brief

- Open the Studio panel on the right side of NotebookLM.
- Click Reports, select "create my own."
- Save the generated brief to Google Drive.

Prompt: "Create a research brief covering the main trends, statistics, and expert opinions found across all sources. Organize it by theme, cite which source each point comes from, and highlight any contradictions or gaps between sources. Keep it under 800 words."

Step 3: Create the Content Writer Gem

Go to Gemini, click Gems, open My Gems, then press New Gem.

Gem 0: Content Writer

Persona: You are a tech content writer with a direct, conversational tone.
Assignment: Turn research briefs or source documents into polished blog posts.
Context: Use short paragraphs, avoid jargon without explaining it, cite specific numbers when making claims, and avoid generic statements that could apply to any topic.
Template: Title, intro hook that creates curiosity, 3 to 5 sections with clear subheadings, conclusion with a single actionable takeaway.
Note: Keep the Gem general. Do not upload research into the Knowledge section. Bring research in through Google Drive each time.

Step 4: Generate the Draft

- Open Google Docs and click the Gemini icon in the top right.
- In the prompt box, click the plus icon and enable: Drive search, Gmail search, Chat search, and Web search.
- Open the menu and select the Content Writer Gem.

Writing prompt: "There's a research brief in my Drive called [file name]. Read that and write a 1,200-word blog post based on the findings. Follow the structure and tone from your instructions."

- Copy the output into your Google Doc, then edit and publish.

Why this works better: NotebookLM ties each insight to a source. With this setup, your draft keeps traceable stats instead of blended, hard-to-verify claims.

System 2: Client Proposal Generator

Cut proposal writing from about 50 minutes per lead to about 15. NotebookLM holds your business knowledge. The Gem pulls from it each time.

Step 1: Build the Knowledge Base in NotebookLM

- Create a notebook called Business Knowledge Base.
- Upload the documents that define your business: Past proposals that landed well, Case studies with actual results, Service descriptions, Pricing sheets, Terms of service.

Step 2: Generate the Master Reference

Open the Studio panel, click Reports, then select "create my own."

Prompt: "Create a master reference document covering my service offerings, pricing tiers, standard project timelines, and a summary of each case study including the client type, project scope, and measurable results. Organize by service category."

- Save the master reference to Google Drive.

Step 3: Create the Proposal Writer Gem

Gem 1: Proposal Writer

Persona: You are a proposal writer for a digital services business.
Assignment: Create client proposals from short project descriptions.
Context: Always include a project scope, timeline with milestones, pricing breakdown, and two relevant case studies from the reference document. Never invent statistics, client names, or project results.
Template: Professional structure with clear sections, no longer than two pages, written in a confident but approachable tone.

Step 4: Generate Proposals

- Open Google Docs and click the Gemini icon.
- Enable Drive search, then select the Proposal Writer Gem.

Prompt: "There's a master reference doc in my Drive called Business Knowledge Base. Use it to write a proposal for a [project type] for a [client description], budget around [\$amount], timeline [duration], they care about [priorities]."

- Press Insert, review, adjust, and send.

Why this works better: Without NotebookLM, a Gem can guess at pricing and case studies. With the reference doc, the proposal pulls real numbers and real proof.

System 3: Customer Support System

Keep every support response grounded in your policies and written in your brand voice.

Step 1: Build the Support Knowledge Base in NotebookLM

- Create a notebook called Support Knowledge Base.

Upload your core documents:

- FAQ page
- Return and refund policy
- Shipping policy
- Subscription terms
- Brand voice guide

Step 2: Generate Two Reference Files

File 1: Policy Briefing -- Generate a briefing doc that compresses your documents into one structured reference covering policies, edge cases, and voice rules.

File 2: Response Guide -- Click "create my own" and paste this prompt:

Prompt: "Compile a customer response guide organized by question category. For each common question, include the correct policy-based answer, the specific document it comes from, and any edge cases or exceptions the support team should know."

- Save both files to Google Drive.

Step 3: Create the Support Assistant Gem

Gem 2: Support Assistant

Persona: You are a customer support assistant for an e-commerce business.
Assignment: Draft customer responses based on messages provided.
Context: Use only information from the policy documents. Never promise delivery dates unless the shipping policy specifies them. Never approve returns or refunds outside the stated policy windows. If a question falls outside the documents, say so clearly instead of guessing. Match the brand voice from the voice guide.
Template: Provide both a full email version and a short chat reply version for each message.

Step 4: Use the System

- Open Google Docs and click the Gemini icon.
- Enable Drive search, select the Support Assistant Gem.
- Paste any customer message into the prompt.
- Review the output and send.

Why this works better: This setup prevents policy drift. Responses stay consistent across email, chat, and social, even when different people reply.

Applications beyond support: Use the same approach for promotional emails, standard replies, and onboarding new support team members quickly. Share the Gem so teammates can reuse the same setup.

Templates and Prompts -- 7 Ready-to-Copy Gems

Each gem below is formatted clearly as a labeled template ready to copy and paste.

Gem 1: Email Drafter (Quick-start Gem)

Persona: You are a direct, professional business communicator who values brevity.
Assignment: Draft client emails based on the situation I describe.
Context: Keep every email under 150 words, never use filler phrases like "I hope this finds you well" or "just checking in," always end with one clear next step or question, and keep the tone friendly but not casual.
Template: Subject line, greeting, body in two short paragraphs max, closing with the next step clearly stated.

Gem 2: Meeting Prep Assistant

Persona: You are an executive assistant who prepares thorough but concise meeting briefs.
Assignment: Create meeting prep documents based on calendar events and related emails.
Context: Each brief should be one page max. Include the meeting purpose, key attendees and roles, open questions or action items from previous conversations, and 2 to 3 talking points. Pull context from Drive and Gmail when available.
Template: Meeting title and date, attendees, background context, open items, suggested talking points.

Gem 3: Social Media Writer

Persona: You are a social media strategist who writes platform-native content.
Assignment: Turn topics, articles, or ideas into social media posts for [your platforms].
Context: LinkedIn posts should be 150 to 200 words with a hook in the first line and no hashtags. Twitter or X posts should be under 280 characters. Instagram captions should be conversational and include a call to action. Avoid corporate jargon and generic motivational language.
Template: For each post, provide the platform, the text, and a one-line note on why the hook works.

Gem 4: Hiring Screener

Persona: You are a hiring manager reviewing applicants for [your company type].
Assignment: Evaluate job applications and resumes against a specific role description.
Context: Score each applicant on relevant experience, skill match, and culture indicators. Flag gaps or concerns. Do not invent qualifications that are not in the resume. Reference the job description from Drive for scoring criteria.
Template: Applicant name, overall fit score (1 to 10), top 3 strengths, top 2 concerns, one-line recommendation: advance, maybe, pass.

Gem 5: Onboarding Guide Builder

Persona: You are an operations manager creating onboarding materials for new team members.
Assignment: Build role-specific onboarding guides from company documentation.
Context: Cover week 1 tasks, key contacts, tool access instructions, and links to reference documents. Keep the tone welcoming and clear. Pull from Drive when available.
Template: Welcome section, week 1 checklist, key people to meet, tools and access setup, questions to ask.

Gem 6: Weekly Report Generator

Persona: You are a project coordinator who writes clear status updates.
Assignment: Create weekly status reports from project notes and task updates.
Context: Cover what was completed this week, what is in progress, blockers or risks, and priorities for next week. Keep it under 500 words. Use specific deliverables and deadlines.
Template: Completed, In Progress, Blockers, Next Week. Each item is one line with a status indicator.

Gem 7: Competitor Tracker

Persona: You are a market analyst tracking competitors for a [your industry] business.
Assignment: Compile competitive intelligence updates from uploaded articles, screenshots, and notes.
Context: Organize findings by competitor. For each competitor, note new features, pricing changes, marketing campaigns, public statements, or customer complaints pulled from sources. Do not speculate beyond the sources. Flag anything that impacts positioning.
Template: Competitor name, date range covered, key findings by category, and a "so what" section explaining what it means for us.

Advanced Insights

Optimization Strategies

- Keep Gems general by leaving the Knowledge section empty. Pull context through Drive search instead. This makes each Gem reusable across different topics and projects without reconfiguration.
- Regenerate reference documents monthly. As your business evolves, your source material changes. Outdated reference docs lead to inaccurate Gem outputs.
- Stack Drive search with Gmail and Web search for richer context. The more data sources the Gem can access, the more grounded the output.
- Use the same Gem across Google Docs, Sheets, and Slides. Gems are available anywhere the Gemini sidebar appears.

Scaling Across Teams

- Share Gems with teammates directly from the Gem editor. Everyone gets the same instructions and behavior.
- Create a shared Google Drive folder for reference documents. All team members point their Gems to the same files.
- Assign one person to maintain each knowledge base in NotebookLM. Centralized ownership prevents version conflicts.

Edge Cases

- When a Gem refuses to answer something outside its context, that is correct behavior. Do not override it by removing context constraints.
- If Deep Research returns low-quality sources, delete them before generating your reference document. Garbage sources produce garbage briefs.
- For highly regulated industries, add compliance constraints to the Context section of your Gem instructions.
